

Microsoft Access Part 2

In The First Lesson

- ▶ Created a table.
- ▶ Queried the table.
- ▶ Joined two tables.

Let's Look At Our Tables

- ▶ Farm and Field table were united into one table on the common column 'Soil.'
- ▶ The table returned as a query only exists if you run the query again. It's not a permanent table in the database.

- 
- ▶ Think out data organization in advance, minimum of shared tables, cluster related info in one table.
 - ▶ Primary key
